

Whitepaper

Version 1.4

Deployed on Ethereum

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

IMPORTANT NOTICE AND DISCLAIMER

This whitepaper has been prepared by Fractionalised World for informational purposes only. It does not constitute an offer to sell, a solicitation to buy, or a recommendation for any security, financial product, or investment of any kind. Nothing contained in this document should be interpreted as financial, legal, tax or investment advice. Readers are strongly encouraged to seek independent professional advice before making any decisions based on the information contained herein.

Prospective participants are encouraged to read the Risk Factors section carefully before engaging with the ecosystem. Each participant is solely responsible for ensuring that participation is lawful in their own jurisdiction.

Regulatory Compliance

The FRW token and associated NFTs are designed with the intention of functioning as utility tokens. This document does not constitute a prospectus or offering document of any kind. Regulatory treatment of digital assets varies by jurisdiction and it is the sole responsibility of each reader to ensure compliance with applicable laws in their region prior to any participation. Fractionalised World has sought independent legal guidance in connection with the design of the FRW token and associated NFTs.

Participant Responsibility

Each participant is solely responsible for determining whether participation in the FRW ecosystem is lawful in their jurisdiction. By accessing this document or participating in the ecosystem, each participant represents and warrants that they have read and understood this notice, that they are not prohibited from participating under the laws of their jurisdiction, and that they are participating entirely at their own risk. Fractionalised World does not provide legal advice applicable to any participant's specific circumstances and makes no representation as to the lawfulness of participation in any particular jurisdiction. Fractionalised World aims to operate within a compliance-first framework and maintains ongoing legal review across its operational jurisdictions.

Forward Looking Statements

This document may contain forward-looking statements subject to risks, uncertainties and assumptions that could cause actual results to differ materially from those expressed or implied.

Subject to Change

All information contained herein is subject to change without notice. Fractionalised World makes no representations or warranties as to the accuracy or completeness of the information provided. Fractionalised World reserves the right to modify any aspect of the ecosystem including token distribution parameters, emission mechanics, eligibility requirements and operational parameters.

Copyright Fractionalised World 2026. This document may not be altered or misrepresented without prior written consent of Fractionalised World.

RISK FACTORS

Participation in the FRW ecosystem involves significant risk. Prospective participants should carefully consider all of the following risk factors before engaging with the platform.

Token Value Risk

The FRW token is a digital asset whose value may fluctuate significantly and without warning. There is no guarantee that the token will retain any particular value after issuance. Participants may lose some or all of the value attributed to their tokens. The token has no guaranteed redemption value and is not backed by fiat currency or any tangible asset.

Token Distribution Risk

All token allocation figures, emission parameters and participation scenarios described in this whitepaper are illustrative and represent theoretical maximum configurations under current protocol conditions. Actual token allocations may vary based on ecosystem participation levels, protocol configuration and smart contract performance. Token distributions within the ecosystem do not constitute a financial return, yield, income or profit of any kind. The FRW token is a utility token intended solely for interaction with the Fractionalised World protocol.

Smart Contract Risk

The ecosystem operates through smart contracts deployed on Ethereum. While designed to operate autonomously and transparently, smart contracts are subject to technical vulnerabilities, bugs and exploits. Fractionalised World may conduct third-party security audits prior to launch; however no audit can guarantee complete security and the occurrence of a vulnerability could result in total loss of funds.

Regulatory Risk

The regulatory treatment of digital assets, NFTs and DeFi protocols varies significantly across jurisdictions and continues to evolve rapidly. Changes in applicable laws or regulations could adversely affect the operation of the platform, the value of the FRW token or the ability of participants to access the ecosystem. Fractionalised World may be required to modify, suspend or terminate aspects of the ecosystem in response to regulatory developments without prior notice.

Platform Risk

Fractionalised World is a new platform currently in development. There is no guarantee that the platform will launch as planned or achieve the level of adoption necessary to sustain the ecosystem long term. Development timelines may be subject to change.

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

Liquidity Risk

There is no guarantee that a liquid market for the FRW token will develop or be maintained after launch. Participants may find it difficult to sell or exchange their tokens at a price reflective of their perceived value. NFTs may have no secondary market.

Third Party Risk

The ecosystem relies on third party service providers including centralised and decentralised exchanges, oracle providers and infrastructure partners. The failure or underperformance of any third party could adversely affect the platform.

Capital Allocation Risk

Fractionalised World Group allocates capital as part of its own independent business strategy. The performance of these capital allocations is not guaranteed. Participants have no ownership stake, legal interest or proprietary claim over any assets held, managed or operated by Fractionalised World Group or any entity within the group. The performance of any capital allocation does not create any obligation or liability toward ecosystem participants. The existence of a Digital Fusion associated with any such activity does not alter this separation or create economic rights for ecosystem participants.

No Recourse

In the event that Fractionalised World or any entity within the Fractionalised World Group ceases operations for any reason, ecosystem participants shall have no claim, recourse or entitlement over any assets, funds or operations of any entity within the group. The purchase of any NFT or token confers no ownership rights, creditor rights or any other legal interest in Fractionalised World or any associated entity.

Community Engagement Initiative Risk

Community engagement initiatives are intended to support participation and engagement within the ecosystem. Individual initiatives may include quests, testing programmes, educational activities, community contributions, campaigns, airdrops or other engagement activities. Eligibility, rewards and participation requirements may vary between initiatives and jurisdictions. Fractionalised World reserves the right to modify, restrict or discontinue any initiative at any time. Participants are responsible for ensuring that their participation complies with applicable laws in their jurisdiction.

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

Executive Summary

Fractionalised World is a next-generation DeFi ecosystem that connects digital participation with real-world products, services, experiences and commercial activity through its proprietary Digital Fusions mechanism.

Unlike traditional DeFi protocols that rely primarily on speculative token dynamics, Fractionalised World is designed to create a digital participation ecosystem with functional connections to real-world products, services, experiences and commercial activity through Digital Fusions. These connections are designed around ecosystem utility and participation and do not confer ownership, equity, revenue, profit or asset rights in underlying businesses or commercial activities.

Participants purchase Access NFTs and Themed NFTs to engage with the ecosystem which may enable interaction with the protocol's structured token distribution mechanics and eligibility for community engagement events.

The Access NFT serves as the essential entry point to the platform, enabling interaction with the protocol's token distribution framework, staking participation tiers and community engagement initiatives.

Themed NFTs enhance this experience by applying protocol allocation multipliers of up to 6x to a participant's combined emission base and enabling additional ecosystem participation functionality, creating a gamified and engaging ecosystem.

The FRW token is built on Ethereum with a maximum supply of 10,000,000,000 tokens. 99.75% of supply is locked within the staking distribution contract ensuring controlled emissions and long-term supply stability. By focusing on structured token distribution parameters rather than percentage-based yield mechanisms, FRW is designed to support sustainable long-term participation while minimising incentives associated with short-term speculative behaviour.

Fractionalised World has sought independent legal guidance in connection with the design of its ecosystem. Regulatory compliance and long-term ecosystem sustainability are at the core of every design decision within Fractionalised World.

All figures are illustrative and not guaranteed. Participation involves risk of loss. This does not constitute financial advice. Each participant is solely responsible for ensuring that participation is lawful in their jurisdiction.

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

1. Fractionalised World

1.1. Introduction

Fractionalised World is a next-generation DeFi ecosystem that connects digital participation with real-world products, services, experiences and commercial activity. At the core of the ecosystem lies Digital Fusions, a proprietary framework through which real-world businesses, products, services, experiences and commercial relationships can be integrated into the FRW ecosystem, creating new ways for participants to access, use and engage with ecosystem functionality.

Separately from participant ownership and digital asset functionality, Fractionalised World and its affiliated entities may conduct business operations and deploy company capital into businesses, products, services and other commercial opportunities as part of their independent business strategy. These activities do not create ownership, equity, revenue, profit or asset rights for ecosystem participants.

Such activities are conducted independently and do not create any entitlement, claim, right, or economic interest for ecosystem participants.

The platform operates through a decentralised DApp, where users gain access through the acquisition of an Access NFT that enables interaction with the protocol's token distribution mechanics. Users can further increase their level of participation within the protocol's distribution mechanics by staking additional tokens. Collecting Themed NFTs enhances this system by providing protocol allocation multipliers and creating a gamified experience.

Fractionalised World may also introduce community engagement initiatives designed to encourage participation, contribution and interaction within the ecosystem. Individual initiatives may include quests, testing programmes, educational activities, community contributions, campaigns and other engagement activities, with eligibility requirements defined separately for each initiative.

1.2. Digital Fusions

Digital Fusions is the proprietary ecosystem framework connecting digital participation with real-world businesses, products, services, experiences and commercial relationships.

Individual Digital Fusions may integrate elements of real-world commercial activity into the FRW ecosystem to create new forms of access, utility, benefits, participation and engagement for ecosystem participants.

Digital Fusions are designed to create functional connections between the digital ecosystem and real-world commercial activity while maintaining a clear separation between ecosystem utility and ownership of the underlying businesses, assets and commercial operations.

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

How It Works

Participants interact with the FRW ecosystem through Access NFTs, FRW, staking, Themed NFTs and other ecosystem functionality.

Digital Fusions provide a framework through which real-world businesses, products, services, experiences and participating partners can connect with this digital participation layer. Depending on the individual Digital Fusion, this may create ecosystem functionality involving access, utility, benefits, participation, experiences or engagement.

Fractionalised World and its affiliated entities may separately conduct commercial activities or deploy company capital into businesses, products, services and other opportunities as part of their independent business strategy.

Digital Fusions do not fractionalise those underlying businesses or assets. Holding FRW, an Access NFT or a Themed NFT does not provide ownership, equity, revenue, profit, dividend or asset rights in any underlying business or commercial activity.

Why Digital Fusions

Traditional DeFi protocols often operate with limited connection to real-world products, services and commercial activity. Digital Fusions are designed to create functional connections between these two environments, allowing real-world businesses, products, services, experiences and commercial relationships to become sources of utility and engagement within the FRW ecosystem.

This connection does not transfer ownership or economic rights in the underlying businesses or assets to ecosystem participants.

Key Principles

Digital Fusions operate on the following principles:

- **Connected Utility:** Real-world businesses, products, services, experiences and commercial relationships may be integrated into the ecosystem through individual Digital Fusions.
- **Functional Participation:** Digital Fusions may create access, utility, benefits, participation and engagement within the FRW ecosystem.
- **Separate Ownership:** Digital Fusions do not fractionalise underlying businesses or assets. FRW and NFT holders receive no ownership, equity, revenue, profit, dividend or asset rights through a Digital Fusion.
- **Independent Commercial Activity:** Business operations and company-level capital deployment remain activities of Fractionalised World and its affiliated entities and are separate from participant ownership.
- **Evolving Functionality:** Individual Digital Fusions may introduce different forms of ecosystem functionality as new products, services, businesses, experiences and participating partners are integrated.

Digital Fusions is a proprietary mechanism of Fractionalised World. The platform and its affiliated entities reserve the right to modify, expand, or redirect the deployment of capital into any sectors or

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

opportunities as determined by the company from time to time as part of its ongoing independent business strategy.

1.3. Digital Fusions and Real-World Activity

Digital Fusions provide the framework connecting the FRW digital ecosystem with real-world businesses, products, services, experiences, participating partners and commercial activity.

Through individual Digital Fusions, elements of real-world commercial activity may be integrated into ecosystem functionality, creating new ways for participants to access, use and engage with the FRW ecosystem.

Depending on the Digital Fusion, this functionality may include access, utility, benefits, participation, experiences or other forms of ecosystem engagement.

Company-level business operations, capital deployment and commercial activity remain legally separate from participant ownership. Digital Fusions do not provide FRW or NFT holders with ownership, equity, revenue, profit, dividend or asset rights in the underlying businesses or commercial activities.

1.4. Nature of Participation

Participation in the FRW ecosystem is intended solely for the purpose of interacting with the platform’s digital infrastructure and protocol mechanics.

Access NFTs, Themed NFTs, and the FRW token are functional digital assets designed to enable interaction with the ecosystem and its features. They are not designed to represent or confer ownership, equity, profit participation, revenue sharing, governance rights over company operations, or any form of financial instrument.

No expectation of profit should be derived from the acquisition or holding of these digital assets, and no representation is made that any secondary market will develop or be maintained.

The availability of functionality through a Digital Fusion does not alter the legal or economic nature of these digital assets or create rights in the real-world business, product, service or commercial activity associated with that Digital Fusion.

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

2. NFTs

2.1. Access NFTs: Big Bang Series

The Big Bang Access NFT (hereafter referred to as the "BBA NFT") is the first iteration of the Access NFT gateway to the FRW ecosystem. Serving as the initial access mechanism, it provides users with the ability to interact with the platform and its available features. The BBA NFT enables interaction with the ecosystem's protocol mechanics, including participation in the protocol's token distribution framework, staking functionality and access to future ecosystem developments as they are introduced.

Additionally, Access NFT holders may interact with community engagement initiatives made available within the ecosystem. Individual initiatives and their eligibility requirements may vary and will be governed by the applicable programme rules. As the foundational access component of the Fractionalised World experience, the BBA NFT is designed to facilitate user interaction and engagement within the platform as it evolves over time.

Note: Subsequent iterations of the Access NFT, including future themed collections, may be introduced in later phases of the ecosystem as determined by the platform.

2.2. Access NFTs Tiered Pricing Structure

The distribution of Access NFTs is organised through a phased release structure designed to gradually introduce participants to the FRW ecosystem. Different phases provide varying bundle compositions while maintaining consistent access to the platform's core functionality. One exception to this structure is the Whale Bundle: which represents a limited allocation intended for participants seeking larger ecosystem allocations.

2.2.1. Whitelist Bundle

The series begins with the Whitelist Bundle (QTY 500), designed to provide early participants with initial access to the FRW ecosystem. Participants gain entry through the BBA NFT which serves as the primary access mechanism to the platform.

In addition to the BBA NFT, participants in the Whitelist Bundle receive one Themed NFT. Participants will also receive an allocation of 1,000 FRW tokens which may be distributed at the time of ecosystem launch as part of the initial bundle composition.

This bundle composition introduces participants to the ecosystem through a combination of the BBA NFT, a Themed NFT and FRW tokens, allowing them to interact with the platform's features and mechanics as they become available.

Further information about Themed NFTs and FRW tokens, including their design and functionality within the ecosystem is provided in later sections.

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

2.2.2. Pioneer Bundle

Following the completion of the Whitelist Bundle phase, the next release phase known as the Pioneer Bundle will introduce an additional 1,990 Access NFTs.

Each Pioneer Bundle includes one BBA NFT and one Themed NFT. Participants will also receive an allocation of 500 FRW tokens which may be distributed at the time of ecosystem launch as part of the bundle composition.

This phased release structure allows additional participants to access the FRW ecosystem while maintaining a consistent framework for ecosystem engagement.

Further information about Themed NFTs and FRW tokens, including their design and functionality within the ecosystem is provided in later sections.

2.2.3. Whale Bundle

Fractionalised World may make available a limited Whale Bundle intended for a small number of participants seeking larger ecosystem allocations. This bundle is strictly limited to 10 allocations.

In this bundle composition, the BBA NFT is provided alongside a larger allocation of FRW tokens and multiple Themed NFTs. The bundle includes one BBA NFT, 50,000 FRW tokens and five Themed NFTs.

The Whale Bundle is structured to allow participants who wish to interact with the ecosystem at a larger scale to obtain the relevant digital assets required for participation within the platform.

Further information about Themed NFTs and FRW tokens, including their design and functionality within the ecosystem is provided in later sections.

2.3. Access NFTs Distribution Mechanics

Each Big Bang Access NFT is designed to interact with the protocol’s emission framework when staked, which may result in the allocation of up to 1 FRW per day under the current protocol configuration, assuming continuous participation and unchanged protocol parameters. Emissions are structured and do not compound, supporting a transparent and predictable token distribution model.

Fractionalised World employs a structured emission model rather than a percentage-based return on capital. This design reflects an emphasis on protocol participation, emission control and economic sustainability rather than yield-based incentives.

2.3.1. Transparent Emissions and Supply Control

A structured emission allocation per NFT enables the protocol to estimate FRW token distribution over time. Unlike percentage-based yield models which scale dynamically with capital inflows, structured emissions establish a predictable issuance framework that may reduce uncertainty and assist in managing token supply dynamics.

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

2.3.2. Maintaining Accessible Participation

The Access NFT is designed primarily as a mechanism for interaction with the Fractionalised World platform. Structured emissions are intended to support equitable participation within the protocol. Percentage-based yield models may concentrate allocations among larger capital participants, whereas structured emissions seek to maintain balanced participation across the ecosystem.

2.3.3. Limiting Short-Term Incentive Structure

Percentage-based yield structures can encourage short-term participation focused on rapid capital rotation. Structured emissions are designed to support ongoing engagement within the ecosystem rather than short-term optimisation of token distributions.

2.3.4. Regulatory Considerations

The structured emission framework is designed to support the functional utility of Access NFTs within the ecosystem. The mechanism is intended to facilitate protocol participation rather than operate as a financial instrument, interest-bearing product, or investment contract.

2.3.5. Long-Term Ecosystem Sustainability

Percentage-based yield mechanisms can create token supply pressures as participation scales. Structured emissions aim to prioritise the long-term sustainability of the ecosystem by establishing a predictable distribution model aligned with platform participation.

2.4. Access NFTs and Community Engagement Initiatives

The ecosystem may support community engagement initiatives designed to encourage participation, testing, contribution, education and interaction within the platform.

2.4.1. Funding Sources

Community engagement initiatives may be supported through ecosystem resources allocated for community growth, participation and engagement. The structure, funding and eligibility requirements of individual initiatives may vary and will be defined by the applicable programme rules.

2.4.2. Programme Structure

Community engagement initiatives may operate periodically or for defined campaign periods. Participation requirements, available rewards, duration and distribution mechanics will be specified for each initiative.

2.4.3. Participation and Eligibility

Eligibility may be based on qualifying activities such as quests, platform testing, educational activities, community contributions or other defined forms of ecosystem participation. Criteria may vary between initiatives.

Eligibility parameters may evolve over time as the protocol develops.

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

2.4.4. Rewards

Rewards offered through individual community engagement initiatives may include FRW tokens, other digital assets, physical items, ecosystem benefits or other forms of reward, subject to availability, programme rules and jurisdictional requirements.

2.4.5. Risk and Compliance

Community engagement initiatives are intended solely to support participation and engagement within the ecosystem. Participation does not provide any ownership rights, profit-sharing rights, or entitlement to financial returns.

Fractionalised World may modify eligibility rules, distribution parameters, timing, and operational mechanics as required to support platform development and compliance with applicable laws and regulations.

Participants remain solely responsible for ensuring that their participation complies with the laws and regulations applicable in their jurisdiction.

2.5. Allocation of Access NFT Mint Proceeds

Funds generated through the minting of Access NFTs may be allocated across several operational categories intended to support the development and operation of the FRW ecosystem.

A portion of mint transaction proceeds may be allocated to community engagement, ecosystem growth and participation initiatives.

A portion of funds may also be allocated toward founder compensation in recognition of the time, expertise and resources required to design, build and maintain the platform.

Marketing initiatives may receive allocations intended to support community growth, ecosystem awareness and strategic partnerships.

Funds may also be directed toward technical development and platform maintenance to ensure the continued reliability, security and functionality of the ecosystem.

A strategic reserve may be maintained to allow the platform to respond to future opportunities, partnerships or ecosystem development initiatives.

Additional allocations may be used for operational expenses, administrative costs and legal or regulatory compliance requirements associated with maintaining the platform.

These allocation categories are indicative in nature and may evolve as the platform develops. Fractionalised World reserves the right to modify allocation priorities as necessary to support the ongoing development and sustainability of the ecosystem.

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

2.6. Themed NFTs

Themed NFTs represent participation in distinct chapters associated with historical eras, economic sectors or conceptual stages of global development within the FRW ecosystem.

Holding Themed NFTs enables additional interaction with certain protocol mechanics, including adjustments to token distribution multipliers within the structured emission framework. Themed NFTs may also enable interaction with additional ecosystem participation functionality and community engagement initiatives, subject to the rules applicable to each initiative.

2.6.1. Eligibility

Eligibility to mint Themed NFTs is linked to the holding of a BBA NFT. Eligible participants may mint Themed NFTs during designated mint periods.

The protocol currently anticipates a maximum mint limit of five Themed NFTs per Access NFT, although these parameters may evolve as the ecosystem develops.

2.6.2. Themed NFT Distribution Mechanics

Themed NFTs may apply protocol allocation multipliers to a participant's combined emission base which includes both the Access NFT participation layer and the staking participation layer. The combined multiplier may reach up to 6x under the maximum protocol configuration when the permitted maximum of five Themed NFTs is held. For a full illustration of how multipliers interact with the combined emission base, refer to Section 3.4 Token Distribution Emission Model.

Holding Themed NFTs may also enable interaction with additional ecosystem participation functionality and community engagement initiatives, subject to the rules applicable to each programme.

Multipliers and eligibility parameters operate within the structured emission framework and do not constitute guarantees of specific token amounts. Actual token allocations may vary based on protocol configuration, participation levels and ecosystem conditions.

All figures presented are illustrative and subject to change.

2.6.3. Allocation of Themed NFT Mint Proceeds

Funds generated through the minting of Themed NFTs may be allocated across several operational categories intended to support the ecosystem.

2.6.3.1. Administrative and Operational Expenses

A portion of proceeds may be allocated toward administrative costs, operational overhead, platform development and regulatory compliance.

2.6.3.2. Community Engagement Initiatives

A portion of mint transaction proceeds may be allocated to community engagement, ecosystem growth and participation initiatives.

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

2.6.3.3. Platform Capital Deployment

A portion of funds may be allocated by Fractionalised World as part of its independent business strategy. Such capital may be deployed into businesses, products, services or other commercial opportunities identified by the company from time to time. This represents company-level activity and is separate from the rights and functionality associated with holding an NFT.

These activities occur at company level and do not create ownership, equity, revenue, profit or asset rights for ecosystem participants. Where such activities are connected to ecosystem functionality through a Digital Fusion, that connection remains one of utility and participation rather than ownership of the underlying commercial activity.

2.6.3.4. Important Notice Regarding Capital Deployment

Themed NFT holders do not obtain ownership rights, equity interests, revenue participation, or legal claims over any assets, ventures or activities undertaken by Fractionalised World or its affiliated entities.

The acquisition or holding of a Themed NFT does not constitute an investment in any underlying asset, business or venture.

Participation in the ecosystem does not provide any entitlement to profits, revenue, dividends or financial returns generated by the company or its affiliated entities.

In the event that Fractionalised World or any affiliated entity ceases operations, Themed NFT holders and ecosystem participants shall have no claim or recourse against the assets or operations of the company.

2.6.3.5. Protocol Utility

The primary functional utility associated with Themed NFTs is interaction with the ecosystem's structured token emission framework and participation in community engagement initiatives.

The FRW token functions as a utility token within the ecosystem and is distributed through structured protocol emissions based on participation. It does not represent an investment contract, profit-sharing mechanism, or financial yield instrument.

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

3. FRW Token

The FRW token is a digital utility token built on Ethereum and designed to enable interaction with the FRW ecosystem. The token functions primarily within the protocol’s staking framework and emission mechanics, which are structured to support ongoing ecosystem participation and controlled token distribution over time.

The token economy is designed with an emphasis on predictable emissions, transparent distribution mechanics and long-term ecosystem sustainability.

By utilising structured token allocation parameters rather than percentage-based yield mechanisms, the protocol aims to encourage continued participation while reducing incentives associated with short-term speculative behaviour.

3.1. Token Details

The FRW token has a maximum supply of 10,000,000,000 (10 billion) tokens.

The native deployment chain is Ethereum , with the potential for future multi-chain deployment as the ecosystem evolves. Multi-chain expansion may enable broader accessibility across different blockchain networks and digital asset communities.

The FRW token is designed for use within the FRW ecosystem and its associated protocol mechanics.

The FRW token is not designed to function as an asset-referenced token or e-money token as defined under Regulation EU 2023/1114 on Markets in Crypto-Assets. This reference does not limit the ecosystem to the European Union. The treatment of the FRW token in other jurisdictions is addressed in the Regulatory Compliance and Regulatory Risk sections.

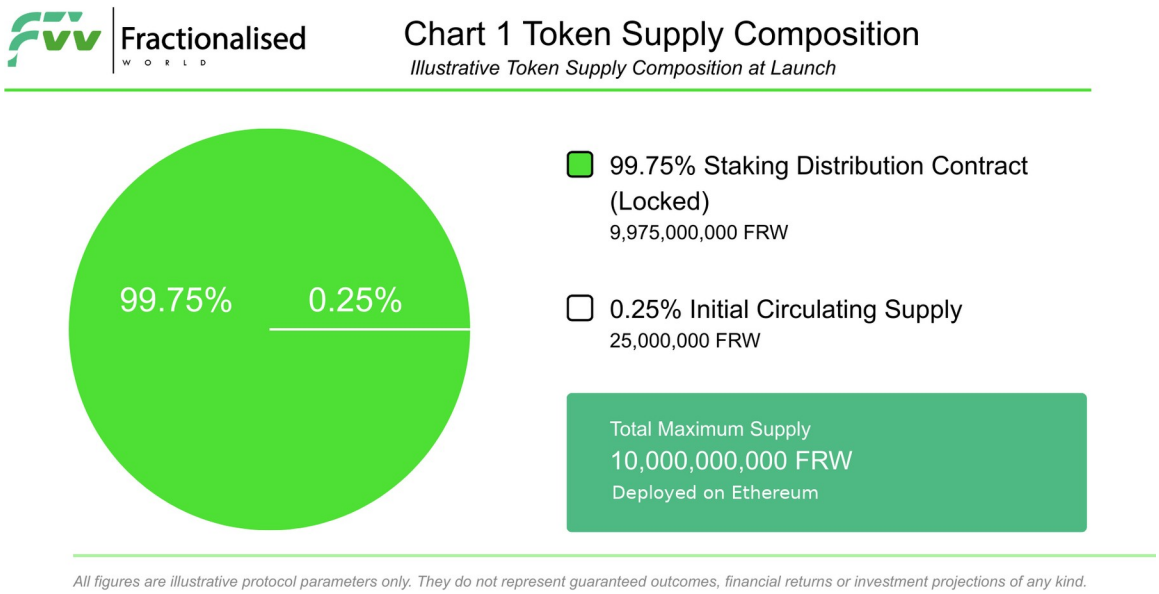

3.2. Supply and Staking Framework

The majority of the FRW token supply, 9,975,000,000 tokens (99.75%), is held within the staking distribution contract. This allocation forms the basis of the ecosystem's structured token distribution framework.

By linking token distribution to protocol participation, the emission model is intended to support gradual token circulation while maintaining transparency regarding long-term distribution parameters.

At ecosystem launch an initial circulating supply of 25,000,000 FRW tokens will be available. These tokens are allocated across several operational and ecosystem categories with final wallet allocations determined prior to launch.

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

3.3. Staking Participation Framework

The FRW staking framework introduces a tiered participation structure. Participants who choose to stake FRW tokens may interact with five participation tiers that correspond to structured daily token allocation parameters.

Illustrative allocation levels within the current framework range from approximately 0.1 FRW per day at Tier 1 up to 5 FRW per day at Tier 5 under the maximum protocol configuration.

These figures are indicative only and may vary depending on ecosystem participation levels and protocol configuration.

Themed NFTs may interact with the staking framework by applying allocation multipliers and may enable interaction with additional ecosystem participation functionality.

All allocation figures are illustrative and do not represent guaranteed outcomes.

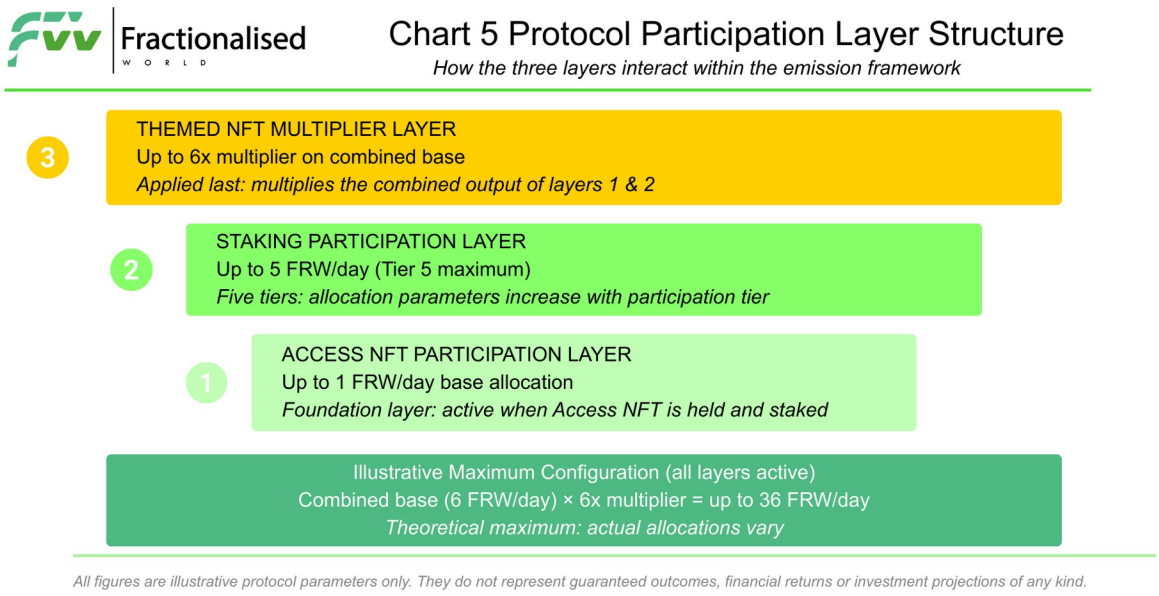

3.4. Token Distribution Emission Model

The Fractionalised World emission model operates through a structured token distribution framework designed to support long-term ecosystem sustainability.

Unlike many DeFi protocols that rely on percentage-based yield mechanisms, the FRW emission model uses predetermined allocation parameters tied to active participation within the ecosystem. This approach prioritises transparency and predictability over dynamic yield calculations and is designed to reduce the inflationary pressure often associated with percentage-based distribution systems.

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

The emission model operates through three primary participation layers, each of which contributes to a participant's overall allocation parameters within the protocol:

Access NFT Participation Layer

Each Access NFT that is active within the protocol may interact with the emission framework and contribute a base allocation of up to 1 FRW per day under the current protocol configuration.

Staking Participation Layer

Participants who choose to stake FRW tokens may interact with the tiered staking framework. The protocol currently supports five participation tiers, with higher tiers corresponding to larger daily allocation parameters. Staking is designed to encourage continued engagement within the ecosystem rather than short-term token rotation.

Themed NFT Multiplier Layer

Themed NFTs may apply protocol allocation multipliers to the combined base generated through Access NFT participation and staking. Multipliers may reach up to 6x under the maximum protocol configuration when the permitted maximum number of Themed NFTs is held. This layer is designed to reward broader ecosystem engagement and create a gamified participation experience.

These three layers are designed to work together to incentivise deeper ecosystem participation while maintaining predictable and transparent distribution mechanics. No single layer operates in isolation, and the interaction between layers is intended to encourage participants to engage with multiple aspects of the protocol.

Actual allocations may vary based on ecosystem participation levels and protocol configuration.

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

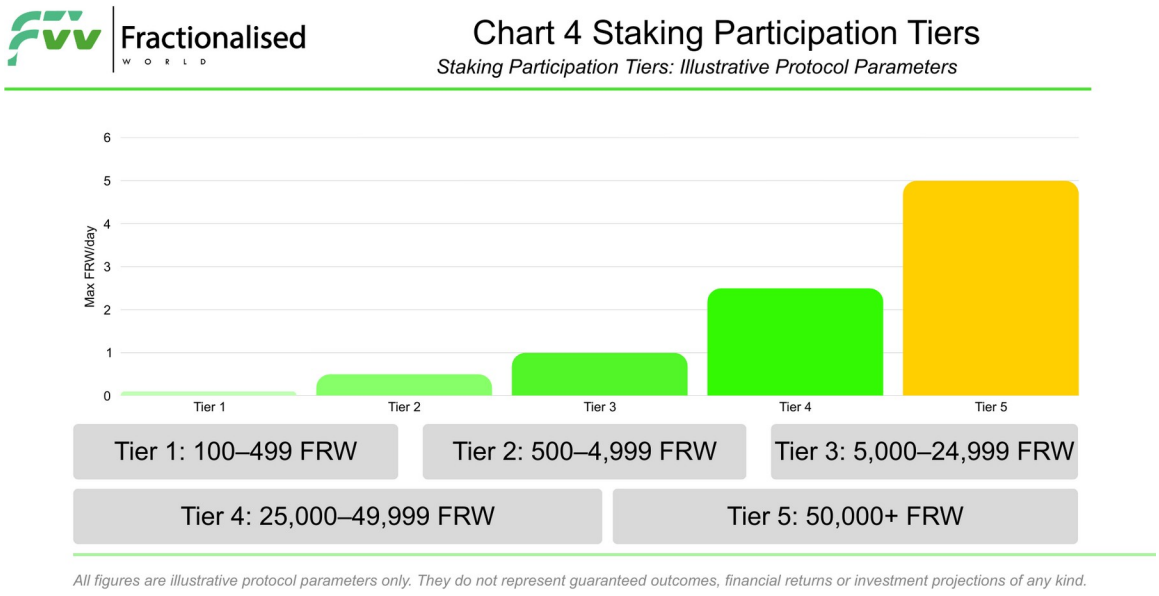

3.4.1. Staking Tier Structure

The staking participation tiers currently operate under the following illustrative framework:

- **Tier 1:** 100 – 499 FRW staked
  - **Maximum allocation parameter:** up to 0.1 FRW per day
- **Tier 2:** 500 – 4,999 FRW staked
  - **Maximum allocation parameter:** up to 0.5 FRW per day
- **Tier 3:** 5,000 – 24,999 FRW staked
  - **Maximum allocation parameter:** up to 1 FRW per day
- **Tier 4:** 25,000 – 49,999 FRW staked
  - **Maximum allocation parameter:** up to 2.5 FRW per day
- **Tier 5:** 50,000+ FRW staked
  - **Maximum allocation parameter:** up to 5 FRW per day

Each tier's base allocation may combine with the Access NFT participation layer before Themed NFT multipliers are applied. The tiered structure is designed to reflect varying levels of protocol engagement rather than to function as a financial return mechanism of any kind.

All tier parameters are illustrative and may be modified as the ecosystem evolves.

3.4.2. Illustrative Maximum Participation Scenario

The following scenario illustrates the maximum allocation configuration for a participant interacting with all available protocol layers. It is provided solely to demonstrate how the three participation

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

layers interact under maximum protocol conditions and does not represent a typical participation outcome.

A participant holding:

- 1 Access NFT
- 5 Themed NFTs
- 50,000 FRW staked

may interact with the emission framework under the following illustrative parameters:

- **Access NFT allocation:** up to 1 FRW/day
- **Staking allocation:** up to 5 FRW/day
- **Combined base allocation:** up to 6 FRW/day

With the maximum Themed NFT multiplier applied, the illustrative maximum allocation may reach up to 36 FRW per day.

This figure represents the theoretical upper boundary of the protocol under current parameters. It is provided for structural illustration only. Actual allocations may vary significantly based on protocol configuration, participation levels and ecosystem conditions.

3.4.3. Ecosystem Maximum Emission Scenario

The supply of Access NFTs is not subject to a fixed maximum, and additional Access NFTs may be introduced as the ecosystem develops. For illustrative purposes, this scenario assumes 20,000 active Access NFTs. Under a purely illustrative scenario in which all 20,000 Access NFTs are active, all participants operate at the highest staking tier and each wallet holds the maximum number of Themed NFTs, the theoretical maximum daily emission across the entire ecosystem would be 720,000 FRW.

This scenario represents the absolute upper boundary of the emission framework and is considered unlikely to occur under typical participation conditions. Actual emissions are expected to vary significantly across participants and over time.

3.4.4. Distribution Contract Sustainability

The staking distribution contract holds 9,975,000,000 FRW tokens, representing 99.75% of the total token supply. This allocation forms the structural basis of the ecosystem's long-term distribution framework.

Under the illustrative maximum emission scenario described above, based on 20,000 active Access NFTs, the contract would hold sufficient token reserves to sustain the emission framework for approximately 37.9 years. Should the number of active Access NFTs exceed this illustrative figure, the sustainability window would adjust accordingly. Given that full ecosystem participation at maximum configuration is unlikely to occur continuously, the practical sustainability window is expected to extend significantly beyond this illustrative figure.

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

3.4.5. Circulating Supply and Distribution Mechanics

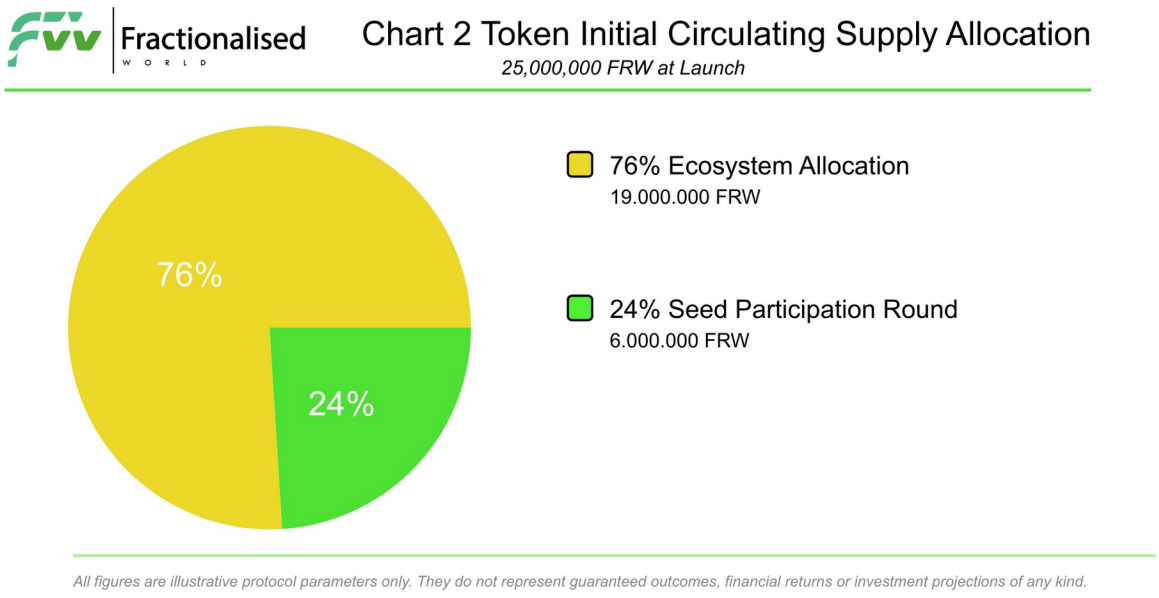

At launch, the circulating supply of 25,000,000 FRW represents 0.25% of the total token supply. The substantial majority of tokens remain held within the staking distribution contract and are distributed gradually through ecosystem participation mechanics over time.

This phased distribution model is intended to maintain long-term supply transparency while aligning token circulation with active protocol participation rather than speculative demand.

3.5. Token Allocation

The initial circulating supply of 25,000,000 FRW is allocated across two primary categories:

- 19,000,000 FRW allocated to ecosystem participation, liquidity and operational support.
- 6,000,000 FRW allocated to the seed participation round.

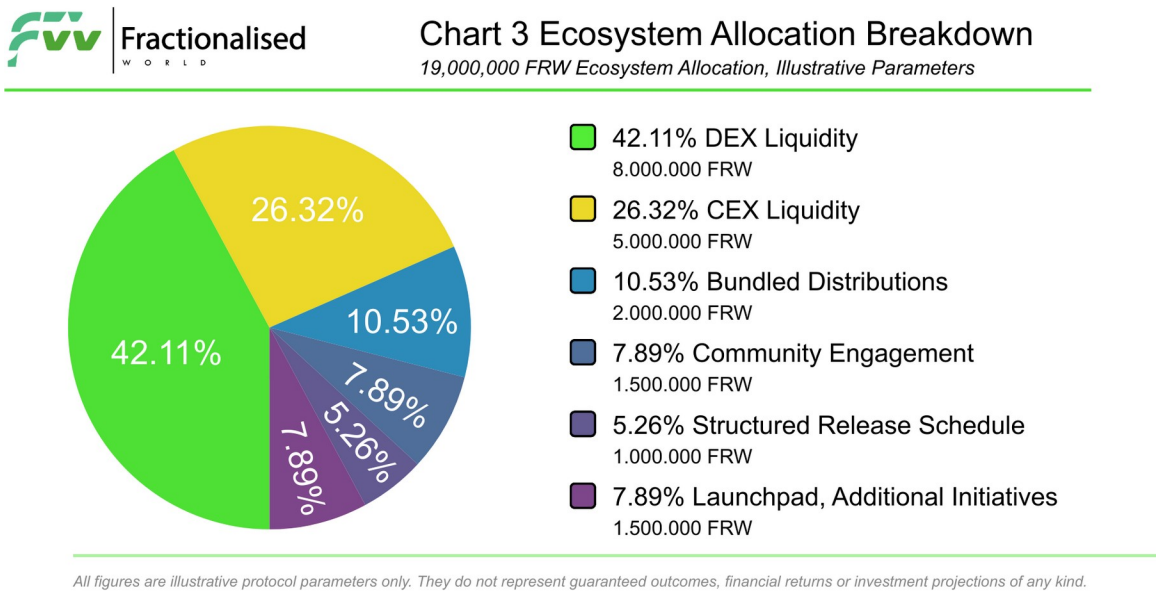

3.5.1. Ecosystem Allocation Breakdown

The 19,000,000 FRW ecosystem allocation is distributed across several categories designed to support market accessibility and ecosystem growth:

- 5,000,000 FRW allocated to centralised exchange liquidity.
- 8,000,000 FRW allocated to decentralised exchange liquidity.
- 2,000,000 FRW allocated to bundled digital asset distributions associated with ecosystem participation.
- 1,500,000 FRW allocated to community engagement initiatives including airdrops and quest-based programmes.
- 1,000,000 FRW subject to a structured release schedule with quarterly unlocks.

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

This allocation may expand slightly to support launchpad integrations or additional community onboarding initiatives as the ecosystem develops.

3.6. Seed Participation Round

A total of 6,000,000 FRW tokens are reserved for early ecosystem participants who supported the initial development phase of the platform in exchange for token allocations subject to the staged release schedule described below.

These tokens are subject to a six-month staged release schedule, with 1,000,000 FRW unlocking per month following launch.

The staged release schedule is a technical distribution parameter designed to support orderly token distribution and reduce potential market disruption. It does not constitute a vesting arrangement, investment return schedule or any form of financial instrument.

Participation in this allocation does not provide governance rights, equity ownership, revenue share or entitlement to financial returns.

3.6.1. Use of Seed Funds

Funds generated through the seed participation round may be allocated across several operational categories including:

- exchange listing costs
- platform development and infrastructure
- ecosystem marketing initiatives
- operational expenses
- strategic reserves

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

- legal and regulatory compliance

Allocation percentages may evolve as the platform develops.

Important Notice

All figures contained within this section are illustrative and represent maximum theoretical scenarios under current protocol parameters.

Actual token allocations may vary based on ecosystem participation levels, staking activity, number of NFTs held, protocol configuration and smart contract operation.

Nothing in this section should be interpreted as a guarantee of token allocation, financial return, investment yield or profit of any kind.

The FRW token is a utility token intended solely for interaction with the Fractionalised World protocol and its associated digital infrastructure.

General

This whitepaper has been prepared for informational purposes only. The information contained in this document is intended to describe the design and functionality of the FRW ecosystem.

Nothing in this document constitutes financial, legal, tax or investment advice. Readers are encouraged to seek independent professional advice before making any decisions based on the information contained in this document.

This document does not constitute an offer to sell, or a solicitation of an offer to purchase, any financial instrument, security or regulated financial product in any jurisdiction.

No person should rely on the contents of this document as the basis for making an investment decision. Participation in the FRW ecosystem should not be undertaken with any expectation of financial return, profit or appreciation in token value.

No Guarantees

All figures, parameters, participation scenarios, token emission schedules and ecosystem mechanics described in this whitepaper are illustrative and represent the design of the system under current conditions.

Participation in digital asset ecosystems involves risk, including the potential loss of digital assets or changes in token value. Digital assets may experience significant price volatility and liquidity conditions may vary over time.

Nothing contained in this document should be interpreted as a guarantee of token allocation, financial return, income generation or economic performance.

Utility Tokens

The FRW token and associated NFTs are designed and intended to function as utility-based digital assets within the FRW ecosystem.

Participation in the ecosystem does not constitute the purchase of a financial instrument, security or regulated financial product.

Ownership of FRW tokens or NFTs does not grant equity ownership, voting rights, profit sharing, revenue participation or any legal claim over assets, ventures or operations managed by Fractionalised World or any of its affiliated entities.

The purchase, minting or holding of ecosystem assets confers no rights over the business activities, operational decisions or capital allocations of Fractionalised World or its affiliated entities.

Regulatory Considerations

The regulatory treatment of digital assets varies between jurisdictions and may evolve over time.

It is the sole responsibility of each participant to ensure compliance with the laws and regulations applicable in their jurisdiction before interacting with the ecosystem or acquiring any associated digital assets.

Fractionalised World makes no representations regarding the legal status of the FRW token, NFTs or ecosystem participation in any specific jurisdiction.

Forward-Looking Statements

This document may contain statements regarding future development plans, ecosystem functionality or potential operational scenarios.

Such statements are based on assumptions and expectations that may change due to technological, regulatory or operational factors.

Actual outcomes may differ materially from those described in this document.

Subject to Change

All information contained in this document is subject to change without notice.

Fractionalised World makes no representation or warranty regarding the accuracy, completeness or continued availability of the information contained herein.

Fractionalised World reserves the right to modify or adjust aspects of the ecosystem including token emission parameters, participation requirements, operational mechanisms or platform features where necessary to support ecosystem sustainability or comply with applicable laws and regulations.

Glossary

Access NFT

A non-fungible token that functions as an entry point to the FRW ecosystem. Ownership of an Access NFT enables participation in ecosystem mechanics including staking participation tiers and community engagement initiatives.

Affiliated Entities

Any separately incorporated company, subsidiary, holding entity or related party associated with the broader Fractionalised World corporate structure, whether currently established or formed in the future. Each affiliated entity operates under its own independent corporate and legal framework and assumes no obligations toward ecosystem participants.

BBA NFT

Big Bang Access NFT. The first iteration of the Access NFT within the FRW ecosystem. The supply is not subject to a fixed maximum. A figure of 20,000 is used for illustrative purposes within this whitepaper.

Community Engagement Initiatives

Ecosystem programmes designed to encourage participation, testing, education, contribution and engagement. Individual initiatives may include quests, campaigns, testing programmes, airdrops and other activities, with eligibility and participation requirements defined separately for each initiative.

Ethereum

A blockchain network on which the FRW token is deployed. Ethereum supports decentralised applications and digital asset transactions.

DApp

Decentralised Application. A software application that operates on a blockchain network rather than a centralised server environment. The Fractionalised World DApp is the interface through which participants interact with ecosystem features.

DeFi

Decentralised Finance. A category of blockchain-based applications that provide financial-style functionality without traditional centralised intermediaries.

Digital Fusions

The proprietary Fractionalised World framework through which real-world businesses, products, services, experiences and commercial relationships can be integrated into the FRW ecosystem.

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

Individual Digital Fusions may create functionality involving access, utility, benefits, participation and engagement for ecosystem participants.

Digital Fusions do not fractionalise underlying businesses or assets and do not provide FRW or NFT holders with ownership, equity, revenue, profit, dividend or asset rights in the underlying businesses or commercial activities.

Company-level commercial activities and capital deployment remain separate from participant ownership.

Emission

The process by which FRW tokens are distributed within the ecosystem through a structured smart-contract distribution model.

FRW Token

The native utility token of the FRW ecosystem deployed on Ethereum. The token supports staking participation tiers, ecosystem interaction and token distribution mechanics. Maximum supply: 10,000,000,000 tokens.

Gamified Experience

The use of interactive mechanics such as participation tiers, multipliers, quests and community engagement initiatives designed to encourage interaction within the ecosystem.

Mint

The process of creating a new NFT on a blockchain network. Participants mint Access NFTs and Themed NFTs to activate participation within the ecosystem.

Multiplier

A feature associated with Themed NFTs that adjusts the token distribution parameters applied to a participant’s combined emission base.

NFT

Non-Fungible Token. A unique blockchain-based digital asset that cannot be replicated and is distinguishable from other tokens.

Platform Capital Allocation

The portion of proceeds generated from NFT mint activity that Fractionalised World and its affiliated entities may allocate into sectors, opportunities or operational initiatives as determined by the company.

NFT holders do not receive ownership rights, profit participation or legal claims over assets acquired or managed through these allocations. Such allocation occurs at company level and does not create ownership, profit participation, revenue rights or other claims for ecosystem participants.

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

Capital allocation may result in businesses, products, services or commercial relationships that subsequently interact with the FRW ecosystem through Digital Fusions; such interaction does not create ownership or economic rights for ecosystem participants.

Pioneer Bundle

An entry package to the FRW ecosystem available after the Whitelist Bundle phase. The package includes one BBA NFT, one Themed NFT and 500 FRW tokens.

Seed Round

An early ecosystem support phase during which a limited number of participants supported the initial development phase of the platform in exchange for token allocations subject to a staged release schedule.

Smart Contract

A self-executing program deployed on a blockchain that automatically enforces predefined rules without requiring intermediaries.

Staking

The process of locking FRW tokens within the ecosystem in order to activate participation tiers that determine token emission parameters within the structured distribution model.

Staking Distribution Contract

The smart contract holding 9,975,000,000 FRW tokens representing 99.75% of the total token supply from which all staking tier allocations are distributed according to predetermined emission parameters. The contract operates autonomously on Ethereum and forms the structural basis of the ecosystem's long-term token distribution framework.

Structured Emissions

A token distribution model used by the ecosystem whereby tokens are allocated through predefined emission parameters embedded in smart contracts rather than through percentage-based yield calculations.

Themed NFTs

NFTs representing participation in distinct thematic chapters aligned with historical eras, sectors or conceptual stages of global development.

Themed NFTs adjust token distribution parameters and may enable interaction with additional ecosystem participation functionality and community engagement initiatives.

Ownership of Themed NFTs does not grant ownership rights or legal claims over assets managed by Fractionalised World or its affiliated entities.

Copyright Fractionalised World 2026. All Rights Reserved. | For informational purposes only. Not financial or legal advice.

Utility Token

A digital token designed primarily to provide access to ecosystem functionality rather than to represent ownership, equity or financial entitlement.

Whale Bundle

A limited entry package restricted to a small number of participants that includes one BBA NFT, multiple Themed NFTs and a predefined quantity of FRW tokens.

Whitelist Bundle

An early access ecosystem package available during the initial launch phase that includes an Access NFT, a Themed NFT and FRW tokens distributed under the launch framework.

Terms and definitions in this glossary are specific to the FRW ecosystem and are provided for informational purposes only.

Fractionalised World is committed to building a transparent, sustainable and compliant ecosystem that connects digital participation with real-world products, services, experiences and commercial activity. This whitepaper represents the design and intentions of the project at the time of publication. All aspects of the ecosystem remain subject to development, refinement and legal review as the platform evolves.

Participants are encouraged to engage with the ecosystem thoughtfully, to read all risk disclosures carefully and to seek independent advice where appropriate. Fractionalised World welcomes its community and looks forward to building something genuinely lasting together.

This document does not constitute financial advice, an offer to sell or a solicitation to buy any financial product or security. All figures are illustrative. Participation involves risk.
